

MAR 2026 / RESEARCH PRESENTATION

Crystalite Presentation Preset

A Beamer starter translated from the Crystalite blog-post into an editorial slide format with bundled fonts, figure cards, and restrained scientific plotting styles.

AUTHOR

Tin Hadzi Veljkovic

CONTEXT

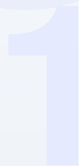

Materials ML / Diffusion
Models

BUILD

Compile with `latexmk`
`main.tex`

Style System

Editorial divider slide with the same quiet hierarchy, generous whitespace, and restrained accent treatment as the Crystalite article.

Design Translation

What the preset keeps from the article

- Soft blue-white paper background instead of flat white.
- Dark slate typography with quiet metadata labels.
- Rounded white figure cards rather than heavy boxes.
- Blue-lilac accents reserved for dividers and plots.

PRACTICAL NOTE

The article itself mixes web fonts. This preset bundles local files so the deck can live offline.

Best suited to research talks, paper explainers, and thesis updates that need a calmer editorial tone than stock Beamer.

Typography And Components

Reusable ingredients included in the preset

Body copy

Keep paragraph text brief, then move dense detail into cards, tables, or figure captions.

Callout

Pair one key equation or chart with one short note instead of stacking multiple equally heavy elements.

EQUATION EXAMPLE

$$\mathcal{C} = (\mathbf{H}, \mathbf{F}, \mathbf{y}), \quad \mathbf{y} \in \mathbb{R}^6.$$

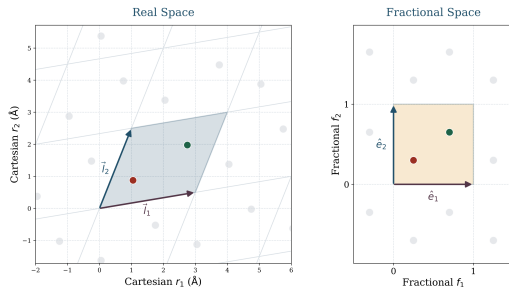

Metadata, code, and commands use the same mono voice.

Figures

Editorial divider slide with the same quiet hierarchy, generous whitespace, and restrained accent treatment as the Crystalite article.

Fractional Coordinates

Image-first layout with editorial captioning

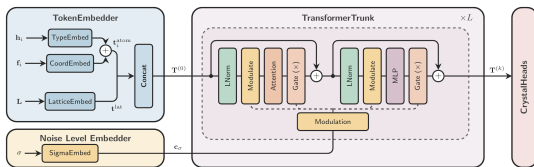

Rounded panel framing mirrors the article's figure treatment.

- Use one dominant figure per slide.
- Keep labels off the image when possible.
- Let the caption carry context.

Architecture Slide Pattern

Pair a system diagram with one decisive takeaway

Use architecture diagrams inside white cards, then trim the prose around them.

Message hierarchy

One token per atom, one global lattice token, and periodic geometry injected through attention rather than a heavy fully equivariant trunk.

Use the right column for the spoken thesis. The figure shows how; the text says why.

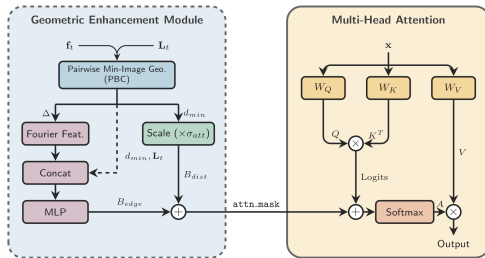

Method Detail

Compact equation plus supporting figure

PERIODIC-IMAGE SEARCH

$$\Delta \mathbf{f}_{ij}^* = \arg \min_{\mathbf{r} \in \Omega_R} \|(\mathbf{f}_i - \mathbf{f}_j + \mathbf{r}) \mathbf{L}\|_2.$$

Dense notation can sit next to a visual without flattening the hierarchy.

A second figure card works well for a method submodule or ablation visual.

Results

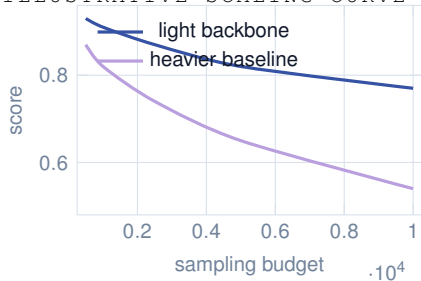

Editorial divider slide with the same quiet hierarchy, generous whitespace, and restrained accent treatment as the Crystalite article.

RESULTS

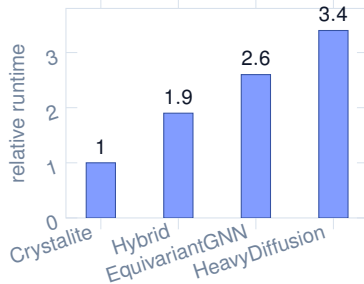

Example Plot Styles

Two editable plot templates are included

ILLUSTRATIVE SCALING CURVE

ILLUSTRATIVE RUNTIME CHART

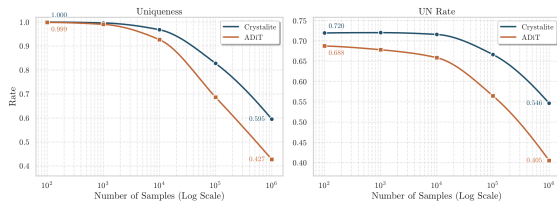

Editable CSV placeholders are bundled for both plots.
RESULTS

RESULTS

Image-Driven Results Slide

Large visual plus compact benchmark summary

This pattern works well for benchmark overviews or qualitative generation galleries.

BENCHMARK SNAPSHOT

Metric	Value
Match rate	0.83
RMSE	0.049
S.U.N.	0.79
Relative runtime	1.00

Keep tables short and move the full benchmark to the appendix.

Template Use

Editorial divider slide with the same quiet hierarchy, generous whitespace, and restrained accent treatment as the Crystalite article.

Starting A New Deck

Minimal source skeleton

```
\documentclass [aspectratio=169]{beamer}
\usetheme {crystalite}
\title {Your Talk Title}
\crystalitekicker {Apr 2026 / Conference Talk}
\author {Your Name}
\begin {document}
\begin {frame}[plain]
  \titlepage
\end {frame}
\section {Problem}
\begin {frame}{One strong slide title}
  Your content here.
\end {frame}
\end {document}
```

Included Files

What is bundled in this folder

- `beamerthemecrystalite.sty`: theme, colors, typography, cards, and section slides.
- `main.tex`: example deck with text, equations, figures, tables, and plots.
- `assets/fonts/`: copied local fonts so the deck builds offline.
- `assets/images/`: copied Crystalite figures for immediate reuse.
- `data/*.csv`: placeholder benchmark data for the plot templates.
- `Makefile` and `latexmkrc`: one-command build helpers.

If you want a darker inverse variant later, it is straightforward to add a second palette on top of the same layout and typography system.

CLOSING SLIDE

Crystalite makes a good presentation language because it is restrained, legible, and visual without becoming ornamental.

Replace the example content, keep the spacing discipline, and the deck will stay coherent.
